=====

A real gold and platinum coin:

Platincoin is a third generation crypto coin. The Platincoin project is a long term infrastructure project. Platincoin is focused on core features, security, usability and simplifying Bitcoin instead of adding features as a marketing gimmick.

There are still major outstanding problems with Bitcoin and those are the problems we are addressing.

- elimination of the need for miners for network consensus through new algorithms, elimination of dependence on the human element in the network operation
- duplicate coinbase outputs
- signature malleability
- reduction in complexity in implementation
- dozens of security/crypto related improvements
- elimination of external dependencies that create security concerns in Bitcoin
- 51% attack proof and strengthening against various attacks
- simplified, more power data, transaction and wallet APIs
- brainwallet, deterministic wallets as default
- network security improvements
- intrinsic support for gmaxwell CoinJoin transaction privacy protocol
- new networking protocols to enable the verification of the mathematical prerequisites for consensus network convergence
- separation of coin creation from consensus network, to eliminate Bitcoin's tendencies towards mining centralization
- directed bipartite TX/UTXO transaction graph structure which is more elegant and efficient than Bitcoin's multi-graph structure
- provably upper bounded network, RAM and CPU resource usage for network operation
- soft coded, adjustable blockchain size parameter to enable network transaction rate scaling
- rolling unspent output state error correction coding in the block header for early detection of software/hardware non-determinism
- blockchain/transaction/history storage database with constant time lookup, indexless operation for all major blockchain history queries
- etc...

Platincoin is 51% attack proof and addresses many of the security issues in Bitcoin. Platincoin is designed to be a simpler, easier to use, more secure Bitcoin. Platincoin emphasizes simplicity, security and usability.

Platincoin is a major research undertaking and has taken several years. We are finishing up phase one of project implementation and then focusing on services and driving adaption.

We use several patented know-how that distinguish our coin from all other coins.
Read more on the site.

The company prepares for release plastic cards having on a balance both a crypto currency and ordinary currencies.

With its help it will be possible to pay in any terminal, having a coin on the balance.

I checked this coin on Google and this what shows up <http://behindmlm.com/mlm-reviews/platincoin-review-top-swisscoin-investor-launches-own-crypto-scam/> so we can say if it walks like a duck and talks like a duck then it is a duck,this is another stay away coin,but if you are a follower of Onecoin then go for it.
